COULD YOUR COMPANY:

- Pay a $50,000+ ransom to get your files back?
- Afford to lose 6 months or more of data?
- Explain a data breach to your customers? To the press?
- Defend against possible lawsuits, fines, and professional penalties?
- Survive the damage to your reputation?

Over 60% of small to medium companies go out of business within 6 months following a cyber attack.

(National Cyber Security Alliance)

WHY SHOULD YOU WORRY?

- Over 70% of cyber attacks target small businesses, and the expenses can be enough to force an organization out of business. (Nat'l Cyber Security Alliance)
- Over half of all U.S. small businesses have had their online security breached.(Keeper and Ponemon Institute)
- 28 people have their passwords stolen every second (Gemalto)

ARE YOU COMPLIANT?

Every professional association requires their members to "take competent and reasonable measures to ensure any client information maintained and transmitted is confidential and secure."

Whether the compliance is with Payments (PCI DSS), HIPAA/HITECH, Gramm-Leach-Bliley (GLBA), Sarbanes-Oxley (SOX), or another - we can help.

Regular monitoring and reporting is a must, and guidance on exactly what "regular monitoring" entails is also outlined within each framework.

THINK YOU CAN'T AFFORD IT?

What would you have to pay in salaries and benefits for one full time tech person? How will you find them?

What about hosting your data and email at a secure, compliant web host?

THE BEST PART:

How much easier would your life be without ANY tech problems?

Seron Security will provide you with a compliant security solution and 24/7/365 IT help desk solution for a fraction of that price.
